

# MTC mWall

## Video Wall management software

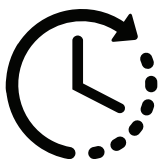

MTC mWall software is developed to ease the operation of controlling content on large format video walls. Managing content across multiple video walls is as easy as drag & drop, stretch to scale, schedule & make timely content, make preset templates and reduce time with just a click to deploy content across the video wall. Multiple users can be assigned with three levels of authority to administer, edit & view the content over the network. The software enables numerous ways to redirect content onto the video wall like live feeds, URLs, stored content on the server and more.

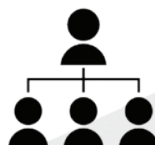

Easy drag & drop function from available sources onto virtual video wall

Multiple source inputs like URL, RSS feed & stored content can be configured

Make templates and schedule the content to change as per each day of the week & call pre defined presets

Multi-level authority can be assigned to users from assigning sources to a user to viewing, editing & managing the content without disturbing one another
